PROFESSIONAL EXPERIENCE:

Infosys Limited, Hyderabad
Senior Associate Consultant

May 2024 – Present

JOB RESPONSIBILITIES:

- Developed a user-friendly, responsive banking web application, ensuring a seamless user experience and interface for desktop environments using third-party platform.
- Converted the web-based banking application into a desktop application by integrating it with the third-party platform, enabling features like window management, notifications, and inter-application communication. It's similar to Electron.
- Developed and optimized the application to run efficiently across multiple platforms by utilizing its features and ensuring compatibility.
- Focused on optimizing the performance of the desktop application, reducing load times, enhancing responsiveness, and ensuring the smooth operation of heavy financial data processing tasks.
- Conducted thorough testing of the desktop application across different platforms, identifying and fixing bugs, issues, and performance bottlenecks.
- Worked closely with backend developers to integrate and retrieve banking data, ensuring seamless data flow between the server and desktop application.
- Stay updated with the latest features, JavaScript technologies, and banking application trends, continually improving the desktop application based on user feedback and business requirements.

Extended Web AppTech LLP, Hyderabad
Software Engineer

Nov 2021 – May 2024

JOB RESPONSIBILITIES:

- Developed responsive and dynamic user interfaces for web applications using React.js, HTML, and CSS.
- Actively participated in daily scrum calls to provide updates on project progress, discuss any blockers, and coordinate tasks with team members.
- Proficient in SDLC and Agile methodologies, such as sprint planning, sprint delivery, and sprint retrospectives.
- Implemented state management using Redux to maintain application state and facilitate data flow.
- Collaborated with the design team to ensure seamless integration of UI components and adherence to design specifications.
- Optimized application performance by identifying and resolving bottlenecks in code and implementing best practices.
- Conducted unit testing using Jest and Enzyme to ensure code quality and maintainability.
- Participated in code reviews to provide feedback and ensure adherence to coding standards and best practices.
- Worked closely with backend developers to integrate front-end components with RESTful APIs.

JOB RESPONSIBILITIES:

- Worked on Waymo autonomous self-driving vehicle systems, supporting machine learning model training and validation.
 - Performed object labelling and annotation on LiDAR sensor data to identify vehicles, pedestrians, traffic signs, and road elements.
 - Tested and validated real-time driving scenarios captured through LiDAR data to ensure accuracy and reliability of perception models.
 - Ensured high-quality annotations by following strict data standards and quality guidelines.
 - Collaborated with the QA and engineering teams to improve detection accuracy and scenario coverage.
-

TECHNICAL SKILLS:

- Languages: **HTML5, CSS3, JavaScript (ES6+), Vanilla JS, TypeScript**
 - Frameworks/Libraries: **React.js (Hooks & Class Components), Redux, Redux Toolkit, React Native, Express.js**
 - Backend / Database: **Node.js, MongoDB, Mongoose, RESTful APIs, AJAX, Web Sockets, JWT (JSON Web Token) Authentication**
 - Tools/Platforms: **Git, GitHub, GitLab, Bitbucket, Jira, CI/CD, SonarQube, npm, yarn, Vite, Webpack, Babel**
 - Design/UI: **Material-UI (MUI), Bootstrap, Tailwind CSS, LESS, Media Queries, Figma**
 - Unit Testing: **Jest, Enzyme, React Testing Library**
 - Others: **JSON, Postman, Responsive Web Design, Mobile-Friendly UI Development**
-

Projects:**CT Tool****Trade Processing & Optimization Platform**

This project is a **web-based trade processing and optimization platform** designed to manage and streamline large volumes of notional trade data sourced from external vendors. Users upload Excel files containing trade information, which the system then **processes, validates, sequences, and optimizes** to reduce overall notional exposure. By applying complex business rules and compression logic, the platform enhances operational efficiency and delivers optimized trade outputs for internal teams.

The frontend is developed using **ReactJS, Webix UI components, WebSockets** for real-time data updates, and **LESS** for modular and maintainable styling. To ensure quality and reliability, **Mocha and Sinon** are used for comprehensive unit testing. Although primarily a web application, it is packaged and deployed within a third-party desktop container platform, enabling a seamless, native-like desktop experience with improved performance and advanced window management capabilities.

Lamsa**A SaaS-based Job Management Platform**

Lamsa is a **SaaS job management platform**, similar to Tradify, designed for service-based businesses to manage scheduling, invoicing, job tracking, and workforce coordination. The platform supports three user roles—**Admin, Business Owner, and Workers**—each with customized permissions and workflows.

- **Admin** manages user onboarding, role permissions, organization settings, and overall system configuration.
- **Business Owners** handle daily operations, assign tasks, track job progress, manage client data, generate invoices, and view performance analytics.
- **Workers** access their job schedules, update task statuses, log work hours/expenses, and communicate with the business owner or clients.

The application includes **multilingual support** implemented using **i18n**, enabling seamless language switching and fully localized UI/UX. The platform delivers a streamlined, role-based workflow to improve operational efficiency and end-to-end job lifecycle management for businesses.

Addax**News & Blog Content Platform**

Addax is a responsive web application that delivers blog posts and articles across multiple categories such as business, technology, finance, lifestyle, and more. Users can explore curated content tailored to their interests through category filters, search capabilities, and simplified navigation.

The application is built using **React.js**, featuring dynamic content rendering from APIs, SEO optimization for better visibility, and multilingual support to reach a broader audience.

Biocon

Secure Authentication Platform for Biocon Pharma

The Biocon Pharma Website is a ReactJS-based platform focused on secure user authentication. It includes modern login and signup flows with **form validation, error handling, JWT-based authentication**, and fully responsive UI design. The platform ensures a seamless and secure experience for users accessing Biocon's digital ecosystem.

Tappmart

Insurance Policy Management PWA

Tappmart is a **Progressive Web App (PWA)** designed to offer a native mobile-like user experience in a web environment. The application provides a centralized solution for managing insurance policies, including creation, modification, renewal, and real-time tracking of policy details. Insurance companies can view coverage terms, premium details, claim histories, and related information efficiently, enabling smoother policy administration through a modern web interface.

Education:

Sana Engineering College (JNTUH)

B.tech (Electrical and Electronics Engineering)

61.56 %

2013 - 2017

Suguna Junior College

Intermediate

87.40 %

2011 - 2013

Teja Talent School

SSC

69.33 %

2010 - 2011

ADDITIONAL SKILLS:

- Excellent communication and collaboration abilities
- Strong problem-solving and analytical skills
- Team Player
- Ability to learn new technologies quickly and adapt to changing environments
